

PLAN AND ROUTE

1. Define the task

Goal, context, constraints, and acceptance criteria

2. Scope, owner, and safety clear?

Yes

No

Clarify boundary

Resolve priority and risks;
set the allowed scope

Recheck

3. Route the work

Choose the owning module;
add integration help if needed

IMPLEMENT AND VERIFY

6. Meets acceptance and review checks?

5. Verify and review

Tests, types, lint, build, and browser;
human SPEC and safety review

4. Implement

Make the smallest testable,
module-owned change

CORRECTION LOOP

Yes

No

DECIDE, LEARN, AND CLOSE THE LOOP

7. Accept and document

Keep the verified change;
record checks and risks;
prepare the handoff

8. Feed learning forward

Turn outcomes into the next
goal, constraint, or
acceptance criterion

Use the evidence

Capture failed checks or
specific review findings

Revise and re-route

Adjust scope, code,
or owning module

NEXT CYCLE
